

Web Security Vulnerability Report

Generated on: 2025-10-28 10:45:52

Scan Summary

URL: https://geostem-qa.azurewebsites.net

Risk Level: Low

Suspicious Indicators: 1

Scan Findings

- Could not perform web security scan: HTTPSPool(host='geostem-qa.azurewebsites.net', port=443): Max retries exceeded with url: / (Caused by NameResolutionError(" Failed to resolve 'geostem-qa.azurewebsites.net' ([Errno 11001] getaddrinfo failed)))

Detailed Vulnerability Analysis

Security Recommendations

Immediate Actions:

- Fix any critical or high-severity vulnerabilities immediately
- Remove or secure exposed sensitive files
- Implement proper input validation and sanitization
- Configure security headers (CSP, X-Frame-Options, etc.)

- Disable dangerous HTTP methods if not needed

Best Practices:

- Use HTTPS everywhere
- Regular security audits and penetration testing
- Keep software and frameworks updated
- Implement Web Application Firewall (WAF)
- Use Content Security Policy (CSP)
- Implement proper error handling
